Citizenship: Brazilian, Portuguese, USA (F-1 visa)

Major Fields of Concentration

Macro-finance, Banking, International finance

Education

Degree	Field	Institution	Year
PhD	Economics	University of Minnesota (expected)	2027
MA	Economics	University of Minnesota	2024
MA	Economics	Escola de Economia de São Paulo - FGV	2020
BA	Economics	Ibmec Minas Gerais	2017

Dissertation

Title: “Essays on Banking and Sovereign Debt Crises”

Dissertation Advisor(s): Professor Manuel Amador, Professor Tim Kehoe

Expected Completion: Summer 2027

Honors and Awards

- 2026–2027 *College of Liberal Arts Graduate Fellowship*, Department of Economics, University of Minnesota, Minneapolis, Minnesota
- 2025 *Errett W. McDiarmid Graduate Fellowship*, Department of Economics, University of Minnesota, Minneapolis, Minnesota
- 2025 *Minnesota Supercomputer Poster Competition (2nd place)*, Department of Economics, University of Minnesota, Minneapolis, Minnesota
- 2024 *Sandor Conference Poster (3rd place)*, Department of Economics, University of Minnesota, Minneapolis, Minnesota
- 2024 *Third Year Paper Competition (2nd place)*, Department of Economics, University of Minnesota, Minneapolis, Minnesota

Research Experience

- 2024 *Research Assistant* for Manuel Amador, University of Minnesota, Minneapolis, Minnesota. Worked implementing and testing quantitative models of sovereign debt.
- 2024 *Research Assistant* for James Schmitz, Federal Reserve Bank of Minneapolis, Minneapolis, Minnesota. Worked cleaning and building historical datasets with information on the mobile home industry in the USA.
- 2021 *Research Assistant* for Luiz Brotherhood, Cezar Santos, Daniel Da Mata, Nezh Guner, Phillip Kircher. Worked on the implementation of a model to study informality and labor market power (MATLAB and Fortran).
- 2020–2021 *Research Assistant* for Tiago Cavalcanti, Cezar Santos, Joe Kaboski. Worked on numerical implementation and calibration of a dynamic general equilibrium model with heterogeneous agents in continuous time using MATLAB.

Teaching Experience

- 2023 *Graduate Math Camp TA*, Department of Economics, University of Minnesota, Minneapolis, Minnesota.
- 2022–2023 *Teaching Assistant* for Intermediate Macroeconomics (Undergraduate), Department of Economics, University of Minnesota, Minneapolis, Minnesota.
- 2019 *Teaching Assistant* for Quantitative Macroeconomics (Graduate), FGV/EESP, São Paulo, Brazil.
- 2019 *Teaching Assistant* for Advanced Macroeconomics (Undergraduate), FGV/EESP, São Paulo, Brazil.

Abstract(s)

Belmudes, Lucas; Mendes, Angelo. "Bank Runs and Market Value Solvency" (Job Market Paper)

Banks hold long-duration securities because these assets hedge fluctuations in the cash flows generated by the deposit franchise: short rates compress deposit margins, but increase long-bond prices. This hedging motive, however, exposes banks to large mark-to-market losses when rates rise and can tighten liquidity and solvency constraints, increasing vulnerability to runs of the kind observed in March 2023. Using U.S. bank data, we document a non-monotonic relationship between banks' shares of long credit-risk-free securities and marked-to-market equity values, indicating that banks with an intermediate ratio of equity to uninsured deposits hold a higher share of long bonds. We interpret this evidence through a continuous-time model in which banks optimally choose a portfolio between a short bond and a long bond, and are subject to state-dependent run risk modeled as a Poisson termination shock that destroys future franchise value when the bank becomes insolvent. The resulting endogenous run hazard generates state-dependent effective risk tolerance and delivers testable implications for dividend payouts that match key patterns in the data. The model also provides a quantitative framework to evaluate interest-rate-risk policies, including capital and liquidity requirements and regulatory limits on duration exposure.

Belmudes, Lucas; Mendes, Angelo. "Domestic vs. Foreign Law: Portfolio Dynamics of Sovereign Debt"

The aftermath of sovereign default episodes for emerging and developed economies since the 1980s underscores the crucial role of the legal jurisdiction under which debt is issued. This paper provides a quantitative framework for evaluating the trade-offs between issuing domestic and foreign-law bonds from the sovereign's perspective. While foreign-law bonds offer stronger legal protections for investors and thus command higher prices, domestic-law bonds are more easily restructured after default. We document differences in the maturity structures of both types of debt for a set of emerging market economies. Then, we disentangle the effects of differences in maturities and recovery rates in shaping the composition of the sovereign's portfolio. The model reveals that when recovery rates are similar, the sovereign favors bonds with shorter maturities. However, when recovery rates diverge, the sovereign prefers to issue the asset with a higher recovery rate. The dominant factor hinges on the magnitude of recovery rate differences between foreign-law and domestic-law debt after default.

Belmudes, Lucas; Mendes, Angelo. "Transparency in Debt Crises"

We study a sovereign's choice of whether to disclose information about its repayment capacity to international lenders in a 3-period Eaton and Gersovitz (1981) environment. Under full disclosure, debt is priced at actuarially fair rates for each type; under non-disclosure, a pooling equilibrium generates cross-subsidization across types. We show that non-disclosure is preferred when the probability of being the low type is small: the adverse selection discount the high type bears under pooling is then small, making opacity relatively cheap. Moreover, non-disclosure is preferred when deadweight losses from default are small: the insurance value of pooling then dominates the pricing gains from transparency. Two pieces of evidence support the framework. Mexico's pre-1995 reserve-disclosure regime illustrates a durable, pre-committed disclosure rule consistent with the model. Using IMF Data Standards Initiatives, we document that no country has ever moved to a lower transparency tier, that countries facing higher recession risk are more often observed to adopt transparency tiers, an association consistent with the model's threshold comparative static, and that early adopters exhibit, for two of the three tier margins, more dispersed residualized issuances than eligible non-adopters, in a direction consistent with the model.
